

QuesCom FAX

QuesCom Fax One Number solution is leading the market. One Number for voice calls and fax allows employees to be reached at any time and get access to a personal fax, accessible with e-mail wherever they are.

- Use a single number for voice and fax
- Fax all kind of files
- Dynamic cover page management

- Send and receive fax from Microsoft Office
- Archive and secure
- Receive your fax in PDF

SEND AND RECEIVE FAX BY EMAIL, EVEN WHILE TRAVELLING

You receive and send fax by e-mail. QuesCom solution ensures confidentiality of documents and enables you to manage fax remotely. After sending a fax, an acknowledgement is received by email in your inbox.

USE A SINGLE DDI FOR INCOMING CALLS AND FAXES

Only One Number needs to be displayed on your business card! Direct line becomes your One Number, to receive and send your calls and faxes, without requiring a new phone line.

MICROSOFT OFFICE COMPATIBLE

CERTIFICATIONS

ANY KIND OF FILE TYPE

Incoming fax arrives directly into your inbox. It displays sender number, time and date. Fax content is delivered in TIFF or PDF format.

BACKUP AND REDUNDANCY

Backup: the QuesCom solution stores the overall fax traffic in each individual inbox and delivers a copy into a central server. It also allows users to archive, share and monitor all incoming and outgoing faxes.

Redundancy: several devices are deployed in order to benefit from a resilient architecture

When you send a fax from your email system, you can attach any Microsoft Office documents.

Senders can also use a virtual printer to fax from any kind of application.

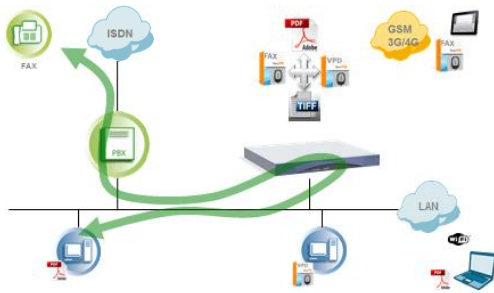

Isolated computers may use integrated Windows fax services, through Microsoft Fax Service.

For larger group of people, installing a virtual printer on a server allows the print to fax service.

Deployments are simplified using internal corporate directories (LDAP/AD).

Any other email system can be used for sending and receiving fax.

OR

Connected in VoIP on the IPBX or in ISDN, fax is automatically integrated into the corporate email system.

In Qasaar Private Cloud architecture, a virtual server ensures redundancy and scalability as well as the most advanced features.

Caracteristics

- CAPACITY**
